

ULTIDRI[®] DEHYDRATION

relevant.

The beauty of ULTIDRI[®] is its transparent operation, you may not even realize it's there!

ULTIDRI[®] was designed with ease-of-use-in mind. Using a revolutionary, patented water removal technology, ULTIDRI[®] dehydrators can be operated continuously—without any operator intervention. This is a HUGE advantage over traditional vacuum dehydrations.

Operation is simple. Just turn on the power and ULTIDRI[®] does the rest. Once ULTIDRI[®] is installed, there's virtually no maintenance required. The occasional changing of the high performance filtration element is essentially all that's required to ensure trouble free operation.

HOW IT WORKS

The membrane fiber is bundled into dehydration contactors where the oil to be treated flows through the inside of the fiber and dry air 'sweeps' the outside of the fiber to capture and remove moisture.
